

SMS 491, RCX tutorial

Use the MINDSTORMS for schools using ROBOLAB book.

Unless you are using your own computer, the lab computers are already setup with software and the bricks have been updated.

Use the training missions that have been installed on the computer to learn how to communicate and program the brick.

Start using the **Pilot** phase and progress to the **Inventor** phase and **Investigator** phase.

As you progress in the book:

1. Perform the programming exercises in pages 194-211 as well as the practice exercises within the text. In particular do the **Extra challenge** exercises at the end of the book.
2. Call me or Jim to see as you accomplish each **Extra challenge** exercise and sign it off.

Feel free to skip exercises associated with media (Piano & camera), exercise regarding inter-RCX communication, control of RCX over the internet, Computer Area, Journal Area, Public Area . We have cameras if you want to do them.
