Homework # 4

1. Read the articles “Clarification of Selected Misconceptions in Physical Geography” and “110 Misconceptions about the Ocean”. Review the list of misconceptions provided in both articles.
2. Choose a misconception from one of the article (it could be a misconception that you discovered that you had). Write a description of the correct concept associated with the misconception as if you were to explain it to your students. Design an activity to help your students address the misconception and an assessment to evaluate students’ learning. When describing your activity and assessment please indicate 1) what pedagogic tools/concept you will be utilizing in your approach, of the ones we have covered in class so far, and 2) the audience addressed (e.g., 8th-graders).
