Chapter 7

Invariant Imbedding Techniques for Light Fields

7.0	<u>Introduction</u>	1
7.1	<u>Differential Equations Governing the Steady State R and T Operators</u>	2
	Local Forms of the Principles of Invariance	2
	The Differential Equations for R and T	4
	Discussion of the Differential Equations	8
	Functional Relations for Decomposed Light Fields	9
7.2	<u>Differential Equations Governing the Time Dependent R and T Operators</u>	17
	Time Dependent Local Forms of the Principles of Invariance	18
	Time Dependent Invariant Imbedding Relation	19
	Integral Representation of Time Dependent R and T Operators	21
	Time Dependent Principles of Invariance	23
	Differential Equations for the Time Dependent R and T Operators	24
	Discussion of the Differential Equations	26
7.3	<u>Algebraic and Analytic Properties of the R and T Operators</u>	27
	Partition Relations for R and T Operators	27
	Alternate Derivations of the Differential Equations for R and T Operators	31
	Asymptotic Properties of R and T Operators	33
7.4	<u>Algebraic Properties of the Invariant Imbedding Operators</u>	35
	The Operator $M(x,z)$	35
	The Connections Between $M(x,z)$, $\mathcal{M}(x,z)$, and $\mathcal{M}(z,x)$	37
	Invertibility of Operators	39
	Representations for the Components of $\mathcal{M}(x,z)$, $\mathcal{M}(z,x)$	41
	The Isomorphism ϕ Between $\Gamma_2(a,b)$ and $G_2(a,b)$	44
	The Physical Interpretation of the Star Product	46
	The Link Between $\mathcal{M}(a,x,b)$ and $\mathcal{M}(a,y,b)$	47
	Representation of $\mathcal{M}(x,y,z)$ by Elements of $\Gamma_2(a,b)$	49
	A Constructive Extension of the Domain of $\mathcal{M}(x,y,z)$	50
	Representation of $\mathcal{M}(v,z;u,y)$ by Elements of $\Gamma_2(a,b)$ and $\Gamma_3(a,b)$	51
	The Connection Between $\Psi(x,y)$ and $\mathcal{M}(s,y)$	52
	A Star Product for the Operators $\mathcal{M}(x,y,z)$	54
	Possibilities Beyond $\mathcal{M}(v,x;u,w)$	58
	Possibilities Beyond $\Gamma_2(a,b)$	61

7.5	<u>Analytic Properties of the Invariant Imbedding Operators</u>	68
	Differential Equations for $\mathcal{M}(x,y)$	69
	Differential Equations for $\mathcal{M}(x,y,z)$	71
	Differential Equations for $\mathcal{M}(v,x;u,w)$	76
	Differential Equations for $M(x,y)$ and $\Psi(s,y)$	79
	Analysis of the Differential Equation for $R(y,b)$	80
7.6	<u>Special Solution Procedures for $R(a,b)$ and $T(a,b)$ in Plane-Parallel Media</u>	83
	The General Equation for $R(a,b;\xi',\xi)$	86
	The Isotropic Scattering Case for R	86
	A Sample Numerical Solution for $r(x;\mu',\nu)$	90
	The General Equation for $T^*(a,b;\xi';\xi)$	93
	The Isotropic Scattering Case for T^*	95
7.7	<u>General Solution Procedures for $R(a,b)$ and $T(a,b)$ in Plane-Parallel Media</u>	97
7.8	<u>The Method of Modules for Deep Homogeneous Media</u>	103
	The Invariant Imbedding Relation for Deep Hydrosols	104
	The Module Equation	106
	Empirical Bases for the Use of the Module Equations	106
7.9	<u>The Method of Semigroups for Deep Homogeneous Media</u>	108
	The Semigroup Equations for $\mathcal{T}(z)$	109
	The Infinitesimal Generator A	112
7.10	<u>The Method of Groups for Deep Homogeneous Media</u>	114
	The Return of the Group $\Gamma_2(0,\infty)$	115
	The Infinitesimal Generator of $\Gamma_2(0,\infty)$	116
	The Exponential Representation of $\mathcal{M}(y)$ and $N(y)$	117
	The Exponential Representation of $\mathcal{A}(y)$	117
	Numerical Procedures of $N(y)$: The Exponential Technique	119
	The Characteristic Representation of $N(y)$	122
	Asymptotic Property of $N(y)$	127
	Asymptotic Properties of Polarized Radiance Fields	128
7.11	<u>Method of Groups for General Optical Media</u>	129
	Analysis of the Group Method: Initial Data	129
	Analysis of the Group Method: Limitations of the Equation of Transfer	130
	Analysis of the Group Method: Summarized	135
	The General Method of Groups	135
	Observations on the Method of Groups	138
	The Method of Groups and the Inner Structure of Natural Light Fields	141
7.12	<u>Homogeneity, Isotropy and Related Properties of Optical Media</u>	143
	Local Concepts	144
	Global Concepts	148
	Summary	151
	Conclusion	152

7.13	<u>Functional Relations for Media with Internal Sources</u>	152
	Preliminary Relations	153
	Integral Representations of the Local Ψ -Operators	154
	Integral Representations of the Global Ψ -Operators	162
	Incipient Patterns and Nascent Methods	164
	Dual Integral Representations of the Global Ψ -Operators	167
	Logical Descendants of $\Psi(s,y:a,b)$	171
	Differential Equations for the Dual Operators	173
	A Colligation of the Component Ψ -Operator Equations	176
	Asymmetries of the Ψ -Operator	179
	A Royal Road to the Internal-Source Functional Equations	181
	Summary and Prospectus	186
	Final Observations on the Relationships Between the Operators $\mathcal{M}(v,x:u,w)$ and $\Psi(s,y:a,b)$	188
7.14	<u>Invariant Imbedding and Integral Transform Techniques</u>	188
	An Integral-Transform Primer	191
	Time Dependent Radiative Transfer	194
	Heterochromatic Radiative Transfer	197
	Multidimensional Radiative Transfer	198
	Conclusion	200
7.15	<u>Bibliographic Notes for Chapter 7</u>	200
