

## VOLUME V

## Chapter 8

## Models for Irradiance Fields

8.0	<u>Introduction</u>	1
8.1	<u>Invariant Imbedding Relation for Irradiance Fields</u>	2
8.2	<u>General Irradiance Equations</u>	5
8.3	<u>Two-Flow Equations: Undecomposed Form</u>	8
	Equilibrium Form of the Two-Flow Equations	13
	Ontogeny of the Two-Flow Equations	13
8.4	<u>Two-Flow Equations: Decomposed Form</u>	14
	Principles of Invariance for Diffuse Irradiance	18
	Classical Models for Irradiance Fields	19
	Collimated-Diffuse Light Field Models	19
	Isotropic Scattering Models	23
	Connections with Diffusion Theory	24
8.5	<u>Two-D Models for Irradiance Fields</u>	25
	On the Depth Dependence of the Attenuating Functions	25
	Two-D Model for Undecomposed Irradiance Fields	30
	Two-D Models for Internal Sources	37
	Two-D Model for Decomposed Irradiance Fields	43
	Inclusion of Boundary Effects	46
8.6	<u>One-D and Many-D Models</u>	51
	One-D Models for Undecomposed Irradiance Fields	52
	One-D Model for Internal Sources	55
	One-D Model for Decomposed Irradiances	56
	Many-D Models	57
8.7	<u>Invariant Imbedding Concepts for Irradiance Fields</u>	61
	Example 1: $\mathcal{R}$ and $\mathcal{T}$ Factors in Two-D Models	62
	Example 2: $\mathcal{R}$ and $\mathcal{T}$ Factors in One-D Models	64
	Example 3: Differential Equations for $\mathcal{R}$ and $\mathcal{T}$ Factors	65
	Example 4: Third Order Semigroup Properties of $\mathcal{R}$ and $\mathcal{T}$ Factors	67
	Example 5: Systematic Analyses of Boundary Effects	71

8.7	<u>Invariant Imbedding Concepts for Irradiance Fields--Continued</u>	
	Example 6: Invariant Imbedding Operator for Interacting Media	76
	Example 7: Differential Equations Governing $\mathcal{R}$ and $\mathcal{T}$ Factors	79
	Example 8: Method of Modules for Irradiance Fields	80
	Example 9: Method of Semigroups for Irradiance Fields	81
	Example 10: Irradiance Fields Generated by Internal Sources	81
8.8	<u>A Model for Vector Irradiance Fields</u>	87
	The Quasi-Irrotational Light Field in Natural Waters	88
	Interpretations of the Integrating Factor	89
	The Curl and Divergence of the Submarine Light Field	91
	General Representation of the Submarine Light Field	93
	Example 1: The case of Isotropic Scattering	94
	Example 2: Asymptotic Form of the Light Field	95
	Global Properties of the Irradiance Field	97
8.9	<u>Canonical Representation of Irradiance Fields</u>	98
8.10	<u>Bibliographic Notes for Chapter 8</u>	101

## PART III THEORY OF OPTICAL PROPERTIES

## Chapter 9

## General Theory of Optical Properties

9.0	<u>Introduction</u>	105
9.1	<u>Basic Definitions for Optical Properties</u>	106
9.2	<u>Directly Observable Quantities for Light Fields in Natural Hydrosols</u>	109
	Introduction	109
	Classical Two-Flow Theory: The Theoretical K Functions	111
	Diffuse Absorption Coefficient $k$	111
	The R-Infinity Formulas	113
	The Inequalities	114
	Observations on Inadequacies of Classical Theory	115
	Exact Two-Flow Theory: Experimental K Functions and R Functions	115
	The Basic Reflectance Relation	118
	The Exact Inequalities	119
	The Significance of the Condition $0 \leq K(z,+)$	120

9.2	<u>Directly Observable Quantities for Light Fields in Natural Hydrosols--Continued.</u>	
	Relative Magnitudes of H and K Functions	121
	Characteristic Equation for $K(z, \pm)$	123
	The Depth Rate of Change of $R(z, -)$	123
	Connections Among the K Functions	123
	K Function for Radiance	125
	General K Functions	125
	Integral Representations of the K Functions	126
	Integral Representations of the Irradiance and Radiance Fields	126
9.3	<u>The Covariation of the K Function for Irradiance and Distribution Functions</u>	128
	Some Elementary Physical and Geometrical Features of $K(z, -)$ and $D(z, -)$	128
	The General Law Governing $K(x, -)$ and $D(z, -)$	136
	The Absorption-Like Character of $K(z, -)$	138
	Forward Scattering Media	140
	The Covariation Rule for $K(z, -)$ and $D(z, -)$	141
	Illustrations of the Rule	143
	The Contravariation of $K(z, +)$ and $D(z, +)$	144
	A Covariation Rule of Thumb	145
9.4	<u>General Analytical Representations of the Observable Reflectance Function</u>	146
	The Differential Equation for $R(\cdot, -)$ : Unfactored Form	148
	The Differential Equation for $R(\cdot, -)$ : Factored Form	149
	Second-Order Form of Differential Equation for $R(\cdot, -)$	149
	The Equilibrium-Seeking Theorem for $R(\cdot, -)$ : Preliminary Observations	150
	The Equilibrium-Seeking Theorem for $R(\cdot, -)$ Observation 1	152
	Observation 2	154
	The Integral Representations of $R(z, -)$	155
	Applications	156
	Special Closed Form Solution	157
	Differential Analyzer or Digital Solutions	157
	Series Solutions	159
	Equivalence Theorem for $R(\cdot, -)$	159
	Connections with the Two-Flow Theory	160
	Summary	162
9.5	<u>The Contrast Transmittance Function</u>	162
	The Concept of Contrast	165
	Regular Neighborhoods of Paths	166
	Contrast Transmittance and Its Properties	168
	Alternate Representations of Contrast Transmittance	171
	Contrast Transmittance as an Apparent Optical Property	172
	On the Multiplicity of Apparent Radiance Representations	177
9.6	<u>Classification of Optical Properties</u>	178

9.7	<u>Bibliographic Notes for Chapter 9</u>	182
Chapter 10		
Optical Properties at Extreme Depths		
10.0	<u>Introduction</u>	183
10.1	<u>On the Structure of the Light Field at Shallow Depths: Introductory Discussion</u>	184
10.2	<u>Experimental Basis for the Shallow-Depth Theory</u>	187
	Summary of the Experimental Evidence	192
10.3	<u>Formulation of the Shallow-Depth Model for K and R Functions</u>	193
	Formulas for $H(z, \pm)$	193
	Formulas for $K(z, \pm)$	194
	Formula for $R(z, -)$	196
	Comparisons of Experimental Data with Calculations Based on the Model	197
	Hypotheses on the Fine Structure of Light Fields in Natural Hydrosols	199
10.4	<u>Catalog of K Configurations for Shallow Depths</u>	201
	Some Special Fine Structure Relations	208
	Conclusion	211
10.5	<u>A General Proof of the Asymptotic Radiance Hypothesis</u>	212
	Introduction	212
	Preliminary Definitions	213
	Formulation of the Problem	218
	The Functions P, Q, R,	219
	The Limit of $K_q(\cdot, \mu, \phi)$	222
	The Limit of $K(\cdot, \mu, \phi)$	226
	Notes and Observations	227
10.6	<u>On the Existence of Characteristic Diffuse Light: A Special Proof of the Asymptotic Radiance Hypothesis</u>	230
	Introduction	230
	Physical Background of the Method of Proof	231
	The Proof	233
	The Equation for the Characteristic Diffuse Light	237
10.7	<u>Some Practical Consequences of the Asymptotic Radiance Hypothesis</u>	238
	Basic Formulas: The Irradiance Quartet	239
	The D and R Functions	240
	The K Functions	241
	The K Characterization of the Hypothesis	242
	The Basic Transfer Equations	243

10.7	<u>Some Practical Consequences of the Asymptotic Radiance Hypothesis--Continued</u>	
	Consequences for Directly Observable Quantities:	
	The Equation for the Asymptotic Radiance Distribution	244
	The Limits of the K Functions	245
	The Limits of the D and R Functions	246
	Consequences for Some Simple Theoretical Models:	
	The Two-D Model for Irradiance Fields	247
	Critique of Whitney's "General Law"	248
	The Simple Model for Radiance Distributions	249
	Further Consequences of Asymptoticity	249
	The Standard Ellipsoid	250
	Expressions for $D(\pm)$ and $R_\infty$	251
	The Determination of $\varepsilon$	252
	An Heuristic Proof of the Hypothesis	253
	A Criterion for Asymptoticity	254
10.8	<u>Simple Formulas for the Volume Absorption Coefficient in Asymptotic Light Fields</u>	255
	Introduction	255
	Short Derivation of I	256
	Long Derivation of I	256
	Derivation of II	257
	Applied Numerology: A Rule of Thumb	258
10.9	<u>Bibliographic Notes for Chapter 10</u>	259
Chapter 11		
The Universal Radiative Transport Equation		
11.0	<u>Intorduction</u>	261
11.1	<u>Transport Equations for Radiometric Concepts</u>	263
	Equation of Transfer for Radiance	263
	Transport Equations for $H(z, \pm)$	265
	Transport Equations for $h(z, \pm)$	265
	Transport Equation for Scalar Irradiance	268
	Preliminary Unification and Preliminary Statement of the Equilibrium Principle	270
11.2	<u>Transport Equations for Apparent Optical Properties</u>	271
	Canonical Forms of Transport Equations for K Functions	272
	Dimensionless Transport Equation for $K(\varphi)$	274
	Transport Equation for $K(z, \theta, \phi)$	274
	Transport Equations for $K(z, \pm)$	276
	Transport Equations for $k(z, \pm)$ and $k(z)$	277
	Transport Equation for $R(z, -)$	278
11.3	<u>Universal Radiative Transport Equation and the Equilibrium Principle</u>	279

11.4	<u>Some Additional Transport Equations Subsumed by the Universal Transport Equation</u>	281
	Summary and Conclusion	285
11.5	Bibliographic Notes for Chapter 11	285
