

**Scripps Institution of Oceanography  
Visibility Laboratory  
SEARCH**

Reports have been OCR'd and completely word indexed using Adobe Acrobat PRO.

To enable the Adobe Acrobat "Search" function:

- 1) select "search"
- 2) Look in: "Select index..."
- 3) select "add"
- 4) select the "SIO\_VisLab.pdx" in the "search" folder in this DVD.

The Acrobat "Search" function supports basic word search (eg: 'ocean') or Boolean searches (eg: "sea not ocean" :: returns only those reports that contained "sea" but do not contain "ocean").

Hovering the mouse over files listed in the search result will cause a pop-up showing the author's name(s) and category ("atmospheric optics", "visibility", or "optical oceanography").

One can also search on the embedded document fields with or without "word" searches:

- 1) "Title" for a word (only) in the title
- 2) "Author" for any listed author of the report (this would not return reports where the desired author was referenced elsewhere in the report).
- 3) "Subject" on "atmospheric optics", "visibility", or "optical oceanography", the three major categories of these reports.
