

TARA-MED (June - September 2014)

Contact:

Hervé Claustre, Joséphine Ras, Celine Dimier

LOV - Caserne Nicolas - BP 08 - Quai de la Darse - 06238 Villefranche sur mer

Tel : +33 4 93 76 37 29 or +33 4 93 76 37 21

Email : claustre@obs-vlfr.fr ; jras@obs-vlfr.fr ; celine.dimier@obs-vlfr.fr

Notes:

¹ Filters extracted in 100% methanol, disrupted by sonication and clarified by filtration (GF/F Whatman). Extraction time lasted 2 hours.

² Analysis by HPLC was carried out the same day. Instrument: HPLC Agilent Technologies 1200

³ undetected pigments are represented by "LOD" (Limit of detection, see Note 7)

⁴ The analytical procedure is described in:

Ras J, Uitz, J, and H. Claustre (2008).
Spatial variability of phytoplankton
pigment distributions in the Subtropical
South Pacific Ocean:
comparison between in situ and

⁵ Detection of carotenoids and chlorophylls c and b: 450 nm, chlorophyll a and derivatives: 676 nm, bchl_a : 770 nm.

⁶ Performance metrics:

Tchl _a injection precision : 0.91%	Calibration precision: 0.4%
Tchl _a accuracy (SeaHARRE-6): 3.72%	Calibration accuracy: 0.3%
Retention time precision: 0.54%	

⁷ Limits of detection : calculated in ng per injection and as the concentrations corresponding to a signal:noise ratio of 3 and for a filtered volume of 1 L.

⁸ Analysts: Celine Dimier and Josephine Ras

⁹ Quality control evaluation of the peaks: QA=1 = "good"

QA=2 = "acceptable"
 QA=3 = "questionnable"

10 9 samples were deleted from the database during quality control procedures (see "deleted samples" sheet)
